Public Hearing on Reducing Carbon Pollution from Existing Power Plants

I am in full support of the Clean Power Plan proposal. A few weeks back I attended the Walton Co. EMC annual meeting in Georgia. The EMC leadership used that event (which has a huge crowd) to scare people into thinking their power rates would be going up due to the EPA Clean Power Plan. The effort to clarify the issue from the floor was cut off immediately. Misinformation is feeding people at a scary rate!

Public Hearing on Reducing Carbon Pollution from Existing Power Plants

Several people at this hearing seem to be confusing smog issues with carbon issues. People who live in big cities like ATL suffer from pollution issues that are not present when you live in the country. Move to the country and your health will improve.

Public Hearing on Reducing Carbon Pollution from Existing Power Plants

This is not a war on coal. If we use the Reclamation Act to repurpose the lands destroyed by Mountaintop removal and convert them to Molten Salt Solar Power Plants we can save jobs in an economically challenged area like West Virginia. Enforce the clean air and clean water acts without exception.

We thank you for your input.

Public Hearing on Reducing Carbon Pollution from Existing Power Plants

My wife and I love to work in the yard and spend time outdoors. Due to the poor quality of air our time is limited and my wife experiences respiratory distress after less than an hour outside. Cleaning up the atmosphere improves quality of life for all Georgians. We should lead with pride and not stay chained to the past. A healthy population is more attractive to business and will make Georgia a "great place to live, work and play" and attract new business and residents to our state. If power plants breathe cleaner we will breathe easier.

Public Hearing on Reducing Carbon Pollution from Existing Power Plants

These regulations will encourage new and innovative energy production. I submit as a case in point the Compressed Air Energy Storage in McIntosh, Alabama—a plant built on an old salt mine, complimented by a wind turbine that compresses air into the underground chamber—an underground battery!

Public Hearing on Reducing Carbon Pollution from Existing Power Plants

I am in favor of the proposed plan. I am also in favor of stronger development of clean energy. Coal energy is cheaper only because they are not paying the costs for their pollution & its impact. Pressure on coal can lead to more emphasis on improving clean energy. The US could be a world leader if we invested in clean energy.

Public Hearing on Reducing Carbon Pollution from Existing Power Plants

I am in favor of the proposed plan.
I am also in favor of a carbon tax as a method of promoting energy efficiency. Many of the opponents' economic arguments on the costs the plan entails ignore the years of costs the public has borne in pollution and climate impacts. The true cost of carbon based energy is much higher than they claim.

Public Hearing on Reducing Carbon Pollution from Existing Power Plants

I am a Master Gardener. For 30 years I have grown a small backyard garden of organic vegetables for my family. I also keep a garden notebook. Almost each day I am out in my garden. Over recent years, I have noticed 1) more weeds, different weeds, 2) more harmful insects, different insects, 3) fewer pollinated blooms. It is clear that something is happening to the climate. The changes to my garden are documented proof. Please regulate carbon.

Public Hearing on Reducing Carbon Pollution from Existing Power Plants

My wife and I travel around the world. We have noticed that the communities that use alternative energy sources, stress energy efficiency and place a premium on protecting the environment, seem to have a healthier population, a stronger workforce and a robust economy. We have found no evidence that regulating the environment results in an economic downturn. So go ahead, regulate carbon, only good things will happen.

Public Hearing on Reducing Carbon Pollution from Existing Power Plants

EPA needs to work with industries to provide reasonable goals to reach to keep coal alive. Build more coal fired generation plants and coal using industry. Coal has been the most used energy source for over 150 years. The U.S. is the Swiss Army Knife of coal our most valuable raw material. Please keep coal alive. The U.S. needs not go backwards in commerce. The U.S. has to remain strong.

Public Hearing on Reducing Carbon Pollution from Existing Power Plants

Carbon pollution, if continued to be allowed to exist at its present rate, will change this world forever for our grandchildren and their children. 2-3°C equals 6-9°F of increase in the average temperature of our planet, and that will surely lead to drought, decreased crops, and water shortage, producing chaos and civil unrest worldwide, not to mention increasing disease due to pollution.

Public Hearing on Reducing Carbon Pollution from Existing Power Plants

The technology exists to retrofit older plants to do it. Costs will be much smaller now than the resulting costs of dirty air later. Even better would be to promote conservation at the same time. Need a multi-prong approach to clean air.

Public Hearing on Reducing Carbon Pollution from Existing Power Plants

It was reported this week that our planet is facing the sixth mass species extinction in the history of our planet. Based on this and other climate change reports demands that any effort regulatory wise or otherwise must be taken to reduce the environment pollution to our country and the world. These efforts should and must supercede cost objections or other lesser objections to this proposed regulations.

Public Hearing on Reducing Carbon Pollution from Existing Power Plants

I strongly support this proposal to reduce carbon pollution with regulations that do not go far enough and the timeline is too long. I am fully aware that nothing is more important to humanity on the basic level is the food we eat, the water we drink and air we breathe. Our food is toxic, our rivers and oceans polluted and the air we breathe is dangerous not only to humanity but also the very ecosystem that sustains all life. When children die because of the air they breathe - please count your money as you watch the gasp.

Public Hearing on Reducing Carbon Pollution from Existing Power Plants

It is our obligation to protect our air, water, and land for future generations. 11% of the world's surface is suitable for sustainable agriculture. 7% of the water on earth is suitable for consumption. Why would American citizens allow a practice like fracking that poisons our land, air, and water to be exempt from the Clean Air and Clean Water acts? This practice is so clean. Enforce the new clean energy plan. James R. Reese Jr.
We thank you for your input.

Public Hearing on Reducing Carbon Pollution from Existing Power Plants

There is not enough wind to sustain the amount of energy needed to supply the customers. There is not enough solar to provide for the energy needs. There is not enough wind and solar combined to provide the energy needs without hydro or coal or nuclear to go along with it. People who believe otherwise are living in a dream world.
