### Notes:

1. Further detailed information could be found in the common reporting format tables of the Party's greenhouse gas inventory, namely "Emission trends (CO₂)", "Emission trends (CH₄)", "Emission trends (N₂O)", and "Emission trends (HFCs, PFCs and SF₆)", which is included in an annex to this biennial report.

2. 2011 is the latest reported inventory year.

3. 1 kt CO₂ eq equals 1 Gg CO₂ eq.

**Abbreviation:** LULUCF = land use, land-use change and forestry.

* The column “Base year” should be filled in only by those Parties with economies in transition that use a base year different from 1990 in accordance with the relevant decisions of the Conference of the Parties. For these Parties, this different base year is used to calculate the percentage change in the final column of this table.

**Includes net CO₂, CH₄ and N₂O from LULUCF.**

### Custom Footnotes

(1) Further detailed information could be found in the common reporting format tables of the Party's greenhouse gas inventory, namely "Emission trends (CO₂)", "Emission trends (CH₄)", "Emission trends (N₂O)", and "Emission trends (HFCs, PFCs and SF₆)", which is included in an annex to this biennial report.

</tbody>
</table>

Abbreviations: CRF = common reporting format, LULUCF = land use, land-use change and forestry.

* The column “Base year” should be filled in only by those Parties with economies in transition that use a base year different from 1990 in accordance with the relevant decisions of the Conference of the Parties. For those Parties, this different base year is used to calculate the percentage change in the final column of this table.

** Fill in net emissions/removals as reported in CRF table Summary 1.A of the latest reported inventory year. For the purpose of reporting, the signs for removals are always negative (-) and for emissions positive (+).

Abbreviations: CRF = common reporting format, LULUCF = land use, land-use change and forestry.

* The column “Base year” should be filled in only by those Parties with economies in transition that use a base year different from 1990 in accordance with the relevant decisions of the Conference of the Parties. For these Parties, this different base year is used to calculate the percentage change in the final column of this table.

</tr>
</tbody>
</table>

* Reporting by a developed country Party on the information specified in the common tabular format does not prejudge the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.
In December 2009, the European Council reiterated the conditional offer of the EU to move to a 30% reduction by 2020 compared to 1990 levels as part of a global and comprehensive agreement for the period beyond 2012, provided that other developed countries commit themselves to comparable emission reductions and that developing countries contribute adequately according to their responsibilities and respective capabilities.

a Reporting by a developed country Party on the information specified in the common tabular format does not prejudge the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.

b This information could include information on the domestic legal status of the target or the total assigned amount of emission units for the period for reaching a target. Some of this information is presented in the narrative part of the biennial report.

**Custom Footnotes**

Legally binding target trajectories for the period 2013-2020 are enshrined in both the EU-ETS Directive (Directive 2003/87/EC and respective amendments) and the Effort Sharing Decision (Decision No 406/2009/EC). These legally binding trajectories not only result in a 20% GHG reduction in 2020 compared to 1990 but also define the EU’s annual target pathway to reduce EU GHG emissions from 2013 to 2020. The Effort Sharing Decision sets annual national emission targets for all Member States for the period 2013-2020 for those sectors not covered by the EU’s emissions trading system (ETS), expressed as percentage changes from 2005 levels. In March 2013, the Commission formally adopted the national annual limits throughout the period for each Member State. By 2020, the national targets will collectively deliver a reduction of around 10% in total EU emissions from the sectors covered compared with 2005 levels. The emission reduction to be achieved from the sectors covered by the EU ETS will be 21% below 2005 emission levels.

In principle, the EU ETS should cover CO2 emissions of all flights arriving at, and departing from, airports in all EU Member States, Norway, Iceland and Liechtenstein and closely related territories. However, since 2012, flights to and from airports from other countries have not been included in the EU ETS. This exclusion was taken in order to facilitate negotiation of a global agreement to address aviation emissions in the forum of the International Civil Aviation Organisation (ICAO). The EU has decided on a national scope in the 2013-2016 period (EU, 2014c).

The EU pledge does not include emissions from land use, land-use change and forestry to deliver its firm independent commitment to reduce greenhouse gas emissions by at least 20% compared to 1990 by 2020. The EU Land Use, Land Use Change and Forestry sector is however estimated to be a net sink over that period.

The 2020 Climate and Energy Package allows Certified Emission Reductions (CERs) and Emission Reduction Units (ERUs) to be used for compliance purposes, subject to a number of restrictions in terms of origin and type of project and to an established limit. In addition, the legislation foresees the possible recognition of units from new market mechanisms. Under the EU ETS, the limit does not exceed 60% of the required reduction below 2005 levels. In the sectors not covered by the ETS, annual use must not exceed 3% of each Member State’s non-ETS greenhouse gas emissions in 2005. Belgium may use an additional 1% from projects in LDCs or SIDS subject to conditions.

The use of these units under the ETS Directive and the Effort Sharing Decision is subject to the limits specified above which do not distinguish between CERs and ERUs, but include additional criteria for the use of CERs.

The use of these units under the ETS Directive and the Effort Sharing Decision is subject to the limits specified above which do not distinguish between CERs and ERUs, but include additional criteria for the use of CERs.

The use of these units under the ETS Directive and the Effort Sharing Decision is subject to the limits specified above which do not distinguish between CERs and ERUs, but include additional criteria for the use of CERs.

AAUs for the period 2013-2020 have not yet been determined. The EU expects to achieve its 20% target for the period 2013-2020 with the implementation of the ETS Directive and the ESD Decision in the non-ETS sectors, which do not allow the use of AAUs from non-EU Parties.

At CMP 9 the EU made a declaration, when adopting the Doha amendment of the Kyoto Protocol, that the European Union legislation on 2020 Climate and Energy Package for the implementation of its emission reduction objectives for the period 2013-2020 does not allow the use of surplus AAUs carried over from the first commitment period to meet these objectives.

There are general provisions in place in the EU legislation that allow for the use of such units provided that the necessary legal arrangements for the creation of such units have been put in place in the EU, which was not the case when this report was prepared.

Note: Belgium does not recognize the use of market-based mechanisms other than those under the Convention for the achievement of quantified economy-wide emission reduction targets.

<td>Energy</td>
<td>CO₂</td>
<td>Increase in renewable energy; other (increase in HP - CHP capacity)</td>
<td>Economic</td>
<td>Implemented</td>
<td>Regional level - Principle of a system of green certificates: 1. A green certificate is allocated to a producer of green electricity every time its production avoids the emission of a fixed amount of CO₂ if it had to be produced in a reference fossil fuel plant (natural gas CCGT). 2. Each year, a predefined (and annually increasing) percentage of electricity supplied to end users has to be covered by green electricity. Suppliers must restitute the necessary number of green certificates to demonstrate that they respect that rule. In case of failure, a penalty fee is due. This situation creates a market for green certificates for the benefit of green electricity producers. In Flanders, a similar process is established for CHP, while CHP is integrated in the green certificates system in Brussels and Wallonia. Green certificates and CHP certificates: share of electricity sales to be covered by RES and/or high efficiency CHP. Guaranteed minimum income for suppliers of green energy. Shares are regularly updated by regional regulation authorities. Federal authority: (offshore windfarms; see also EP-A05) 1. A green certificate is an immaterial good certifying that a producer produced a given amount of green electricity (ie. produced from renewable energy sources) during a given period of time 2. There is a legal obligation for the transmission network operator (TSO) to buy all green certificates granted to the holders of a domain concession and originating from offshore wind energy production. The obligation</td>

<td>EC-B01 : Financial support to RUE and RES in the residential sector*</td>
<td>Energy</td>
<td>CO₂</td>
<td>efficiency improvement in buildings</td>
<td>Other (Fiscal)</td>
<td>Implemented</td>
<td>Financial incentives for the rational use of energy (RUE) and RES : combination of regional subsidies and federal tax deduction for investments generating energy savings. Covers most of equipment such as wall insulation, high performance double glazing, condensing boilers, heating systems regulations, efficient hot water heaters and heat pumps. In Wallonia, application for subsidies can be submitted directly or through the &quot;Alliance for Employment and Environment&quot;, proposing conventions between house owners and the authority : individuals commit to realize a package of investments (minimum one action on the building envelope and one on the heating/SHW system) and authorities provide subsidies and offer a 0% interest loan to cover the additional expense. Still in Wallonia, energy subsidies have merged with households rehabilitation/renovation mechanisms and their level of support varies with the income of owners. In Flanders important financial incentives are given through the public service obligations concerning rational use of energy for electricity distribution network operators (EC-A01). On top of the grants from the network operators a renovation grant is awarded for certain energy-related investments. in addition, the property tax for energy efficient newbuilds is automatically lowered if the newbuild autoperforms the prevailing requirements. The Federal tax deduction was discontinued in January 2012, except for roof insulation (albeit at a lower rate). This last tax deduction mechanism is now transferred to the Regions</td>

<td>IP-A02 bis: Long-term Energy/CO₂ efficiency agreements in the industrial sector *</td>
<td>Industry/industrial processes</td>
<td>CO₂</td>
<td>Efficiency improvement in industrial end-use sectors</td>
<td>Voluntary Agreement</td>
<td>Implemented</td>
<td>In Flanders: energy intensive companies with a total annual primary energy consumption of at least 0.1 PJ are encouraged to further reduce their energy consumption by signing the energy policy agreement with the Flanders Government. Enterprises (directly or through their professional association) make a voluntary commitment to draft an energy plan, implement all economically viable RUE investments, and conduct a study on the potential for CHP, and heat and cold networks. For non-ETS companies economically viable investments are defined as investments that have an IRR of 12.5%. The IRR of investments with an IRR between 10% and 12.5% needs to be recalculated every year. For ETS companies, economically viable investments are defined as investments that have an IRR of 14%. The IRR of investments with an IRR between 10% and 14% needs to be recalculated every year. In Wallonia: agreements are prolonged until 2020, based now on investments presenting a payback time of up to 5 years. Additional commitments for industries are the establishment of a CO₂ mapping of their activities (carbon balance of the site or GHG life cycle analysis of main products) and feasibility study of potential RES implementation on the industrial site. Each federation must establish an energy/GHG roadmap to 2050.</td>

<tr>
<td>AG-B01: Reduction of GHG emissions from fertilisers and manure usage*</td>
<td>Agriculture, Forestry/LULUC F</td>
<td>N\textsubscript{2}O, CH\textsubscript{4}</td>
<td>Reduction of fertiliser/manure used on cropland; improved livestock management</td>
<td>Information</td>
<td>Economic</td>
<td>Regulatory</td>
<td>Implemented</td>
<td>Rural development plans are supplemented by specific measures on the rational use of organic and nitrogen-based fertilisers. Such policies, initially aimed at reducing the stress of pollution on surface and underground waters, contribute to the reduction of N\textsubscript{2}O and CH\textsubscript{4} emissions. Reductions in livestock sizes are also expected and should also contribute to emissions reductions. Moreover, cross compliance regulations aim to protect pastures: prohibiting pasture reductions, regulating carbon and acidity contents and using measures to combat erosion. Additionally, Flanders takes a number of other actions to further reduce CH\textsubscript{4} and N\textsubscript{2}O emissions. Flanders will focus on further research and implementation of nutritional strategies, the composition of feed, good manure management practices, awareness-raising and (the provision of) information. Flanders will also work towards the small-scale anaerobic fermentation of pure manure by giving financial support for small-scale fermenters.</td>

Note: The two final columns specify the year identified by the Party for estimating impacts (based on the status of the measure and whether an ex post or ex ante estimation is available).

Abbreviations: GHG = greenhouse gas; LULUCF = land use, land-use change and forestry.

* Parties should use an asterisk (*) to indicate that a mitigation action is included in the ‘with measures’ projection.

* To the extent possible, the following sectors should be used: energy, transport, industry/industrial processes, agriculture, forestry/LULUCF, waste management/waste, other sectors, cross-cutting, as appropriate.

* To the extent possible, the following types of instrument should be used: economic, fiscal, voluntary agreement, regulatory, information, education, research, other.

* To the extent possible, the following descriptive terms should be used to report on the status of implementation: implemented, adopted, planned.

**Abbreviations**: GHG = greenhouse gas, LULUCF = land use, land-use change and forestry.

<sup>a</sup> Reporting by a developed country Party on the information specified in the common tabular format does not prejudge the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.

<sup>b</sup> For the base year, information reported on the emission reduction target shall include the following: (a) total GHG emissions, excluding emissions and removals from the LULUCF sector; (b) emissions and/or removals from the LULUCF sector based on the accounting approach applied taking into consideration any relevant decisions of the Conference of the Parties and the activities and/or land that will be accounted for; (c) total GHG emissions, including emissions and removals from the LULUCF sector. For each reported year, information reported on progress made towards the emission reduction targets shall include, in addition to the information noted in paragraphs 9(a–c) of the UNFCCC biennial reporting guidelines for developed country Parties, information on the use of units from market-based mechanisms.

<sup>c</sup> Parties may add additional rows for years other than those specified below.

<sup>d</sup> Information in this column should be consistent with the information reported in table 4(a)I or 4(a)II, as appropriate. The Parties for which all relevant information on the LULUCF contribution is reported in table 1 of this common tabular format can refer to table 1.

**Abbreviations:** GHG = greenhouse gas, LULUCF = land use, land-use change and forestry.

- Reporting by a developed country Party on the information specified in the common tabular format does not prejudge the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.
- Parties that use the LULUCF approach that is based on table 1 do not need to complete this table, but should indicate the approach in table 2. Parties should fill in a separate table for each year, namely 2011 and 2012, where 2014 is the reporting year.
- For each category, enter the net emissions or removals reported in the most recent inventory submission for the corresponding inventory year. If a category differs from that used for the reporting under the Convention or its Kyoto Protocol, explain in the biennial report how the value was derived.
- Enter one reference level or base year/period value for each category. Explain in the biennial report how these values have been calculated.
- If applicable to the accounting approach chosen. Explain in this biennial report to which years or period the cumulative contribution refers to.
- Label each accounting approach and indicate where additional information is provided within this biennial report explaining how it was implemented, including all relevant accounting parameters (i.e. natural disturbances, caps).
- Specify what was used for the category “other”. Explain in this biennial report how each was defined and how it relates to the categories used for reporting under the Convention or its Kyoto Protocol.

**Abbreviations**: GHG = greenhouse gas, LULUCF = land use, land-use change and forestry.

\(^a\) Reporting by a developed country Party on the information specified in the common tabular format does not prejudge the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.

\(^b\) Parties that use the LULUCF approach that is based on table 1 do not need to complete this table, but should indicate the approach in table 2. Parties should fill in a separate table for each year, namely 2011 and 2012, where 2014 is the reporting year.

\(^c\) For each category, enter the net emissions or removals reported in the most recent inventory submission for the corresponding inventory year. If a category differs from that used for the reporting under the Convention or its Kyoto Protocol, explain in the biennial report how the value was derived.

\(^d\) Enter one reference level or base year/period value for each category. Explain in the biennial report how these values have been calculated.

\(^e\) If applicable to the accounting approach chosen. Explain in this biennial report to which years or period the cumulative contribution refers to.

\(^f\) Label each accounting approach and indicate where additional information is provided within this biennial report explaining how it was implemented, including all relevant accounting parameters (i.e. natural disturbances, caps).

\(^g\) Specify what was used for the category “other”. Explain in this biennial report how each was defined and how it relates to the categories used for reporting under the Convention or its Kyoto Protocol.

Note:
- 1 kt CO\(_2\) eq equals 1 Gg CO\(_2\) eq.

**Abbreviations**
- CRF = common reporting format, LULUCF = land use, land-use change and forestry.

Custom Footnotes
- No KP figures were provided in 2015 submission.

Documentation Box:

-\(^a\) Reporting by a developed country Party to the information specified in the common tabular format does not prejudice the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.
-\(^b\) Developed country Parties with a quantified economy-wide emission reduction target as communicated to the secretariat and contained in document FCCC/SB/2011/INF.1/Rev.1 or any update to that document, that are Parties to the Kyoto Protocol, may use table 4(a)II for reporting of accounting quantities of LULUCF contributing to the attainment of that target.
-\(^c\) Parties can include references to the relevant parts of the national inventory report, where accounting methodologies regarding LULUCF are further described in the documentation box or in the biennial reports.
-\(^d\) All values are reported in the information table on accounting for activities under Article 3, paragraphs 3 and 4, of the Kyoto Protocol, of the CRF for the relevant inventory year as reported in the current submission and are automatically entered in this table.
-\(^e\) Additional columns for relevant years should be added, if applicable.
-\(^f\) Cumulative net emissions and removals for all years of the commitment period reported in the current submission.
-\(^g\) The values in the cells “3.3 Offset” and “Forest management cap” are absolute values.
-\(^h\) The accounting quantity is the total quantity of units to be added to or subtracted from a Party’s assigned amount for a particular activity in accordance with the provisions of Article 7, paragraph 4, of the Kyoto Protocol.
-\(^i\) In accordance with paragraph 6 of the annex to decision 16/CMP.1, debits resulting from harvesting during the first commitment period following afforestation and reforestation since 1990 shall not be greater than the credits accounted for on that unit of land.
-\(^j\) In accordance with paragraph 21 of the annex to decision 16/CMP.1, for the first commitment period a Party included in Annex I that incurs a net source of emissions under the provisions of Article 3 paragraph 3 may account for anthropogenic greenhouse gas emissions by sources and removals by sinks in areas under forest management under Article 3 paragraph 4 up to a level that is equal to the net source of emissions under the provisions of Article 3 paragraph 3, but not greater than 0.8 megatonnes of carbon times five, if the total anthropogenic greenhouse gas emissions by sources and removals by sinks in the managed forest since 1990 is equal to or larger than the net source of emissions incurred under Article 3 paragraph 3.

In accordance with paragraph 11 of the annex to decision 16/CMP.1, in the first commitment period of the Kyoto Protocol only, additions to and subtractions from the assigned amount of a Party resulting from forest management under Article 3 paragraph 4, after the applications of paragraph 10 of the annex to decision 16/CMP.1 and resulting from forest management project activities undertaken under Article 6, shall not exceed the value inserted in the appendix of the annex to decision 16/CMP.1, line five.

**Abbreviations**: AAUs = assigned amount units, CERs = certified emission reductions, ERUs = emission reduction units, lCERs = long-term certified emission reductions, tCERs = temporary certified emission reductions.

**Custom Footnotes**

Since 2013, it has no longer been possible to track the use of flexible mechanisms in the EU ETS directly through information on the EUTL public website: CERs and ERUs are exchanged into EUAs and after the exchange they cannot be further tracked as CERs or ERUs. These exchanges will become public at installation level two years after transfers conducted with this initial information reflecting use in 2013 become available in 2016. The use of flexible mechanisms under the ESD cannot be quantified either at this moment: As the compliance assessment for the first year 2013 under the ESD will only take place in 2016, any potential use of units for 2013 will only take place in 2016. Thus, for the year 2013 no data are currently available to report on.

---

<sup>a</sup> Reporting by a developed country Party on the information specified in the common tabular format does not prejudge the position of other Parties with regard to the treatment of units from market-based mechanisms under the Convention or other market-based mechanisms towards achievement of quantified economy-wide emission reduction targets.

<sup>b</sup> For each reported year, information reported on progress made towards the emission reduction target shall include, in addition to the information noted in paragraphs 9(a-c) of the reporting guidelines, on the use of units from market-based mechanisms.

<sup>c</sup> Parties may include this information, as appropriate and if relevant to their target.

<sup>d</sup> Units surrendered by that Party for that year that have not been previously surrendered by that or any other Party.

<sup>e</sup> Additional rows for each market-based mechanism should be added, if applicable.

Abbreviations: GHG = greenhouse gas, LULUCF = land use, land-use change and forestry.

\(a\) In accordance with the “Guidelines for the preparation of national communications by Parties included in Annex I to the Convention, Part II: UNFCCC reporting guidelines on national communications”, at a minimum Parties shall report a ‘with measures’ scenario, and may report ‘without measures’ and ‘with additional measures’ scenarios. If a Party chooses to report ‘without measures’ and/or ‘with additional measures’ scenarios they are to use tables 6(b) and/or 6(c), respectively. If a Party does not choose to report ‘without measures’ or ‘with additional measures’ scenarios then it should not include tables 6(b) or 6(c) in the biennial report.
Table 6(a)

Information on updated greenhouse gas projections under a ‘with measures’ scenario

</tbody>
</table>

\(^b\) Emissions and removals reported in these columns should be as reported in the latest GHG inventory and consistent with the emissions and removals reported in the table on GHG emissions and trends provided in this biennial report. Where the sectoral breakdown differs from that reported in the GHG inventory Parties should explain in their biennial report how the inventory sectors relate to the sectors reported in this table.

\(^c\) 20XX is the reporting due-date year (i.e. 2014 for the first biennial report).

\(^d\) In accordance with paragraph 34 of the “Guidelines for the preparation of national communications by Parties included in Annex I to the Convention, Part II: UNFCCC reporting guidelines on national communications”, projections shall be presented on a sectoral basis, to the extent possible, using the same sectoral categories used in the policies and measures section. This table should follow, to the extent possible, the same sectoral categories as those listed in paragraph 17 of those guidelines, namely, to the extent appropriate, the following sectors should be considered: energy, transport, industry, agriculture, forestry and waste management.

\(^e\) To the extent possible, the following sectors should be used: energy, transport, industry/industrial processes, agriculture, forestry/LULUCF, waste management/waste, other sectors (i.e. cross-cutting), as appropriate.

\(^f\) Parties may choose to report total emissions with or without LULUCF, as appropriate.

**Abbreviations:**
- ODA = official development assistance, OOF = other official flows; USD = United States dollars.
- Parties should fill in a separate table for each year, namely 2011 and 2012, where 2014 is the reporting year.
- Parties should report, to the extent possible, on details contained in this table.
- Parties should explain, in their biennial reports, the methodologies used to specify the funds as provided, committed and/or pledged. Parties will provide the information for as many status categories as appropriate in the following order of priority: provided, committed, pledged.
- Parties may select several applicable sectors. Parties may report sectoral distribution, as applicable, under “Other”.
- Parties should report, as appropriate, on project details and the implementing agency.
- Parties should explain in their biennial reports how they define funds as being climate-specific.
- Please specify.
- Cross-cutting type of support refers to funding for activities which are cross-cutting across mitigation and adaptation.

**Custom Footnotes**

Due to technical problems (the BR CTF does not allow to introduce more than 300 rows), data in CTF table 7b have been aggregated. For further information, please refer to table 7b in the Biennial Report.

**Abbreviations:** ODA = official development assistance, OOF = other official flows; USD = United States dollars.

\textsuperscript{a} Parties should fill in a separate table for each year, namely 2011 and 2012, where 2014 is the reporting year.

\textsuperscript{b} Parties should report, to the extent possible, on details contained in this table.

\textsuperscript{c} Parties should explain, in their biennial reports, the methodologies used to specify the funds as provided, committed and/or pledged. Parties will provide the information for as many status categories as appropriate in the following order of priority: provided, committed, pledged.

\textsuperscript{d} Parties may select several applicable sectors. Parties may report sectoral distribution, as applicable, under “Other”.

\textsuperscript{e} Parties should report, as appropriate, on project details and the implementing agency.

\textsuperscript{f} Parties should explain in their biennial reports how they define funds as being climate-specific.

\textsuperscript{g} Please specify.

\textsuperscript{h} Cross-cutting type of support refers to funding for activities which are cross-cutting across mitigation and adaptation.

**Custom Footnotes**

Due to technical problems (the BR CTF does not allow to introduce more than 300 rows), data in CTF table 7b have been aggregated. For further information, please refer to table 7b in the Biennial Report.

<tr>
<td>Malawi</td>
<td>Mitigation and Adaptation</td>
<td>The AFSP II aims to contribute towards climate-smart agriculture, i.e. agriculture that sustainably increases productivity (food security), resilience (climate change adaptation) and reduces greenhouse gas emissions (mitigation) in Malawi through the scaling-up of agroforestry innovations; namely: (1) Fertilizer trees and conservation agriculture to build an evergreen agriculture that enhances accumulation of soil organic matter thus enhancing crop productivity and resilience to climatic risks; (2) Fruit trees – to improve household nutrition, health and income; (3) Fodder trees – to improve milk yields for smallholder dairy farmers to enhance nutrition, health and income; and (4) Woodlots – for firewood and timber production. However, as firewood is a major by-product of the fertilizer tree systems, the promotion of fuel wood species as a stand-alone activity will be unlikely. The purpose of the AFSP II is to use effective partnership to increase food and nutrition security, income and livelihoods of resource-constrained smallholder farmers in Malawi. The expected impacts of the project are to: (1) improve food security, nutrition, income and livelihoods of smallholder farmers and (2) increase resilience of the farm environment. The project will produce four outcomes: 1. Tree germplasm suppliers produce quality tree seeds and seedlings for farmers; 2. At least 100 extension staff use improved methods to match tree options to sites and farmer situations; 3. Research services generate and share information on what tree options work best in different circumstances; 4. Policy makers formulate and implement appropriate policies to mainstream agroforestry nationally. The project aims to produce the following outputs: 1. Options for quality tree seed and seedling supply appropriate to different circumstances developed and quality tree germplasm made available to suppliers. 2. Capacity and skills of extension staff and farmers strengthened, and agroforestry widely practised. 3. Impact of tree promotion on livelihoods and environment measured. 4. Guidelines for the development of a coherent agroforestry policy established. This cooperation between the government of Flanders and the World Agroforestry Centre contributed to the scientific knowledge about fertilizer trees and their benefits towards climate change (GW Sileshi, Chitedze e.a.; Agroforestry: Fertilizer Trees; In book: Encyclopedia of Agriculture and Food Systems, Publisher: Elsevier, Editors: Neal Van Alfen, p.222-234, online available at <a href="http://www.researchgate.net/publication/264789099_Agroforestry_Fertilizer_Trees">http://www.researchgate.net/publication/264789099_Agroforestry_Fertilizer_Trees</a>)</td>

<tr>
<td>South Africa</td>
<td>Mitigation and Adaptation</td>
<td>South Africa agrarian sector is affected by a context of far-reaching and fundamental change, related to the country’s land and agrarian transformations, in a context of overall deregulation of its economy. Moreover, the country is characterised by the lack of publicly available precise data and analyses and the weak involvement by stakeholders in decision-making regarding land and agrarian transformation. On top of that, the increased interconnectivity of the land and agrarian questions in South Africa, Africa and the world, leads to the necessity of apprehending them within today’s global context of agrarian, environmental, and food security questions. These observations call for the establishment and development of a well-coordinated information, data, analysis and evidence-based decision-making support entity, grouping the major academic and analytical players on one hand, and a broader stakeholder panel on the other hand, aiming at producing and making available data, information and analyses, and supporting evidence-based and inclusive decision-making processes with regards land and land-based activities in South Africa. The SA Observatory’s goal is to promote evidence-based and inclusive decision-making over land resources in South Africa and beyond by generating, analysing and making available land-based information and by widening participation to all stakeholders. Sustainable land management is relevant to climate change policy in South Africa.</td>

<td></td>
<td></td>
<td>The Flemish Partnership Water for Development (VPWvO) was launched on 22 March 2004, bringing together Flemish actors in the field of water: NGOs, public water companies, private companies, research and educational institutions, local and provincial governments. Through this platform, Flanders aims to contribute to MDG7c, providing safe drinking water, improved hygiene conditions and adequate sanitation in developing countries through sustainable water and sanitation projects. For a Flemish Partnership project to be approved for co-financing by the government of Flanders, at least two Flemish partners and at least one local partner must cooperate and contribute to the project. Flemish actors can contribute financially, in the form of technical expertise, or in a combination of both. These partnerships create synergies and a healthy exchange of knowledge and expertise, for the benefit of all involved. Appropriate tools and technology are chosen, taking into account the capacity of the beneficiaries. Examples can be given in the field of sanitary infrastructure, drinking water installations, solar energy, drinking water quality, etc. Every project contains also a capacity building component to guide and coach the stakeholders to use the tools and technology, to maintain the installations and to transfer the infrastructure and good practices to the stakeholders.</td>

<tr>
<td>Viet Nam</td>
<td>Multiple Areas</td>
<td>Green Growth Strategy Facility</td>
<td>1. A facility to support the implementation of Viet Nam's Green Growth Strategy is created and developed. This result includes the development of the Facility including all its operational rules and procedures as well as management structure, its subsequent improvement through monitoring and evaluation during the implementation of the calls for proposals; 2. Green growth capacity &amp; MPI leadership increased: general capacity building for MPI and the ministries in the Green Growth Coordination Committee is foreseen. For MPI, the project will support capacity building processes and activities to increase its leadership and coordination role in the field of implementing the strategy; 3. Piloting activities in three provinces are supported. The 3 provinces where the Belgian bilateral cooperation is active in the field of climate change are supported in the field of Green Growth; 4. The Facility supports, through a call for proposals, green growth interventions throughout the country; 5. Good practices disseminated and replicated: identification, dissemination and replication of existing good/best intervention practices are completed. This result is primarily aimed at harvesting the low hanging investment opportunities (win-win solutions that are both economically and environmentally sound) and ensuring their widest possible dissemination and replication.</td>

<td>Latin America and the Caribbean</td>
<td>Adaptation</td>
<td>UNESCO: Managing Water Resources in Arid and Semi-Arid regions of Latin America and Caribbean (MWAR-LAC)</td>
<td>The overall goal of the project is to contribute to improving the quality of life and alleviating the poverty of local communities in arid and semiarid environments in Latin America and the Caribbean, through a reduction in the vulnerability of water resources systems to global changes based on sound scientific knowledge. The proposal has three main thematic priorities a) Improved water governance as a basis to attain integrated water resources management, b) use of modern techniques and methodologies to assess and improve water use efficiency; c) hydro-climatic risk management including decision making. Project goals a) Integrated water management (Water Governance): • Objective: to encourage actions aimed at increasing water governance in pilot areas; b) Climate risk management: • Objective: to encourage the inclusion of climate information in water management; c) Water supply increase and efficient use of water: • Objective: support the adoption of systems aimed at assessing and increasing water supply; Outcomes: 1. Improved water governance in the pilot areas; 2. Hydro-climate information systems included in water management in the basins located in the pilot areas; 3. Increasing knowledge on water use efficiency in basins and building capacities to evaluate and adopt water efficient use methods and techniques.</td>

<td>International Labour Organisation (ILO): Decent Work in the Green Economy</td>
<td>Development objective: In all, the project’s goal is to contribute to the creation of green jobs for women and men in sustainable enterprises as a means to poverty reduction and social inclusion and strengthen national initiatives for just transitions to a green economy. Outcomes: 1. Improved ability of governments' and social partners' in Mexico and Turkey to assess the scope for green jobs and to formulate, monitor and review relevant gender-sensitive policies and programmes. 2. National stakeholders received training on issues related to decent work in the green economy 3. National stakeholders and key partners have access to knowledge and evidence on sectors with green jobs potential and challenges and opportunities for decent work creation and sustainable enterprises in the transition to a green economy 4. National constituents have developed and submitted national strategies for the promotion of decent work in a transition to the green economy II. Improved ability and commitment of stakeholders in China to formulate and implement skills for green jobs development strategies 1. Pilot training workshops on skills for green jobs have been conducted in selected areas 2. Constituents have developed policy recommendations for a skills for green jobs strategy in the energy efficient building sector of the Jiangsu province III. An expanded knowledge base on green jobs is accessible for ILO constituents and relevant international organizations for use in gender sensitive policy and programme development 1. ILO constituents and ILO staff have access to knowledge and knowledge sharing facilities on green jobs (webpage, networks, documentation of experiences) 2. ILO constituents have access to global reports on green jobs</td>

<td>multiple</td>
<td>Adaptation</td>
<td>IFAD: Support to the Adaptation for Smallholder Agriculture Programme</td>
<td>The Adaptation for Smallholder Agriculture Programme (ASAP) was launched by the International Fund for Agricultural Development (IFAD) in 2012 to make climate and environmental finance work for smallholder farmers. A multi-year and multi-donor financing window, ASAP provides a new source of cofinancing to scale up and integrate climate change adaptation across IFAD’s approximately US$1 billion per year of new investments. The programme is joined up with IFAD’s regular investment processes and benefits from rigorous quality control and supervision systems. ASAP is driving a major scaling up of successful ‘multiple-benefit’ approaches to smallholder agriculture, which improve production while reducing and diversifying climate-related risks. In doing so, ASAP is blending tried-and-tested approaches to rural development with relevant adaptation know-how and technologies. This will increase the capacity of at least 8 million smallholder farmers to expand their livelihood options in an uncertain and rapidly changing environment.</td>

<td>Africa, Asia &amp; LAC</td>
<td>Adaptation</td>
<td>UNESCO: Addressing Water Security: Climate Impacts and adaptation responses in AFRICA, ASIA AND LAC (WATER SECURITY).</td>
<td>UNESCO- IHP is the only United Nations specialized agency with a specific mandate to promote water science, continues to play a pivotal role, in assisting and guiding Member States in water-related scientific, conservation, protection, managerial and policy issues. IHP has evolved from an internationally coordinated hydrological research programme into an all encompassing, holistic programme whose aim is to facilitate education and capacity-building, as well as enhance water resources management and governance. The project aims at implementing activities focusing on developing adaptation strategies in order to contribute to achieve water security impacted by climate change particularly focusing vulnerable regions such as mountains and arid and semi-arid regions. The specific objectives of the project proposal are to: 1. Develop a set of benchmarks on vulnerabilities and adaptive capacities in the context of Climate change, particularly for the mountainous regions, based on the case studies of the IHP projects (MWAR-LAC and Andean Glacier); 2. Generate evidence-based knowledge for adaptation strategies to address water security; 3. Raise awareness and enhance capacities to assess, monitor and communicate the impacts of and responses to climate change on natural and socio-economic environments at local, national and regional level; 4. Develop strategies and policy guidelines considering vulnerabilities, opportunities and potentials for adaptation, with particular reference to strengthening the role of local communities; 5. Facilitate, strengthen and develop coordination with the on-going research activities in the different regions; 6. Provide a global forum to discuss key findings from regional workshops and initiatives in order to develop a worldwide statement on climate change adaptation in mountainous regions; 7. Generate and share information and knowledge about the environment in mountain societies, promote a policy dialogue with local stakeholders, national governments and regional bodies, and strengthen human and institutional capital to promote the training of new leaders in order to contribute to sustainable development of water resources impacted by Climate Change.</td>

<td>Multiple Areas</td>
<td>UNDP: Strengthening Capacity to Incorporate Climate Change Adaptation and Resilience Planning into National Biodiversity Strategies and Action Plans (NBSAPs) through the NBSAP Forum</td>
<td>The National Biodiversity Strategies and Action Plans (NBSAPs) are being updated to incorporate the Aichi Targets and to fulfill other related obligations before the Convention of Biological Diversity (CBD). However, many countries count on uneven levels of technical support for the task, in spite of current and growing demand for it. With the funds provided by UNDP will develop guidance material on incorporating climate resilience and adaptation into NBSAPs and their implementation, and through the NBSAP Forum, will make the guidance universally available in multiple languages. To develop the guidance, UNDP will work with leading countries, CBD, UNEP and other partners, to identify, consolidate and document existing best practices. UNDP will develop a practical toolkit, available in multiple languages. In addition, it will hold on-line information and training sessions. Three sets of results are expected: (1) Best practices in incorporating climate change resilience and adaptation into national biodiversity and development planning are clearly identified globally; (2) At least 30 countries receive targeted support on how to use the climate resilience-NBSAP guide; and (3) Climate guide is widely shared to all CBD Parties.</td>
