General Energy Efficiency Utility Information
The Public Service Board ("Board") oversees Vermont's Energy Efficiency Utility Program ("EEU Program"). This program provides energy efficiency services to residential and business electricity and heating-and-process-fuel consumers throughout Vermont. These services help consumers invest now in energy efficiency measures that will save Vermonters money throughout the lifetime of the efficient products (an average of approximately 11 years).

The Board has appointed two entities to provide energy efficiency services --- Efficiency Vermont and the City of Burlington Electric Department ("BED") --- and is considering whether to appoint an entity to deliver natural gas energy efficiency services. Since 2000, Efficiency Vermont has been providing technical advice, financial assistance, and design guidance to help make Vermont's homes, farms, and businesses more efficient. For more information about the services offered by Efficiency Vermont, and about energy efficiency in general, see Efficiency Vermont's website: www.efficiencyvermont.org or call Efficiency Vermont at 888-921-5990. BED provides many of these energy efficiency services in its service territory. If you are a customer of BED, please contact BED directly at 802-865-7300 for information about energy efficiency services available to you.
